

KIT INFINITY PRO II

-Isoinertial column for horizontal works. Can be installed on the wall. - Column of 2.08 meters high.

- 2 Physio Movements (2 Rehab or 1 Physio and 1 Rehab mechanism)

- 2 rotating blocks in composite material positioned at the top and bottom of the column

- 2 pivoting stainless steel pulleys

- Dyneema D6 braid

-High strength bearings and C45 steel shaft.

- Powder coating.

-2 Cam Jam system carabiners for upper part exercises.

- 2 pulleys to double the strength of the system.

-2 Flywheels size S (2.6 kg) -2

Flywheels size M (3.8 kg)

-2 Handles

-2 Anklets

The SpaceWheel Infinity Pro II isoinertial column is made of steel and aluminium powder-coated.

The Rehab mechanism is composed of a C45 steel shaft on which the rope is wound linearly. The Physio mechanism is made up of two rope guide plates that allow the rope to wrap around the tree by overlapping and thus increasing the winding diameter, thus allowing a fluid and fast movement reducing to a minimum the tear in the inversion of the movement.

The column is also equipped with 1 pulley support connected to the movements that allow the correct alignment and rolling up of the ropes and in addition they are provided with a fixed anchorage point to allow to double the load with the dedicated pulleys.

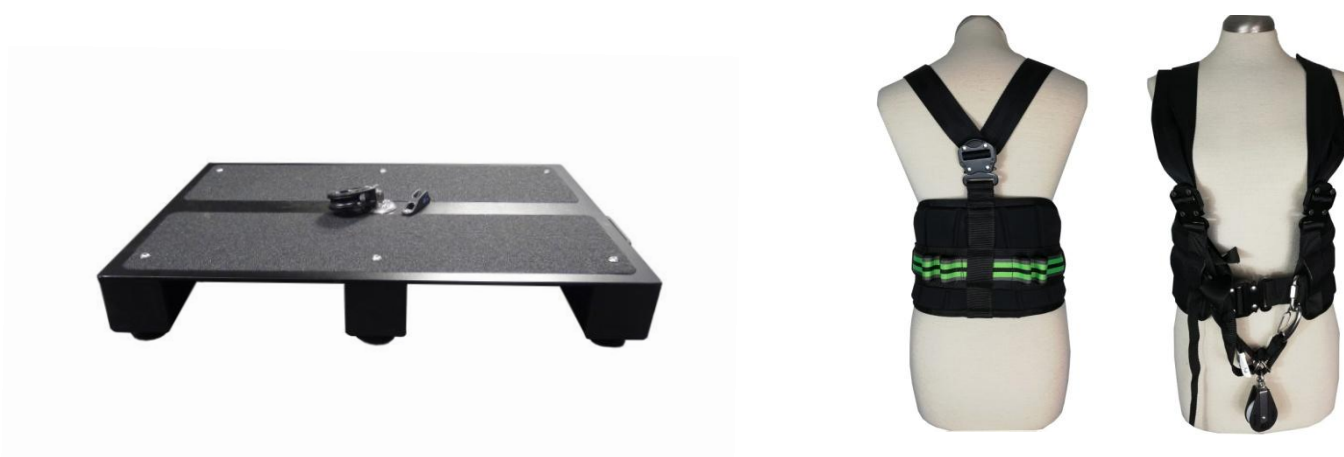

The supplied ropes have a length of 4.5m and are made of dyneema fibers protected by polyester.

The 4 flywheels in the kit have a diameter of 320mm and are 1 flywheel S of 2.5kg, 1 flywheel M of 3.8kg and 1 flywheel L of 5kg. The flywheels are stackable and interchangeable on the movements.

The kit comes with 2 handles, 2 anklets and 2 carabiners (Cam Jam System) to perform exercises with the upper and lower part of the body.

With the addition of SpaceWheel Tab, the harness and an additional L size flywheel it is also possible to perform squat and other exercises with the lower part of the body with the Infinity Pro II column.

Infinity Pro II is compatible with SWDS (Spacewheel data software), the kit for measuring wireless real-time data. It is possible to monitor the execution of the exercises through the dedicated tablet and the graphic display of force, power and express speed.

SpaceWheel also guarantees maximum safety and reliability as all products are provided with a **declaration certificate** that can be easily consulted on our online site.
